

FAN SERIES

FLIP5

Ensuring highly-efficient performance the FLIP5 is usable for an air exchange in both axial directions. The FLIP5 is our new symmetrically profiled blade being used when it comes to wood drying, smoke extraction, fruit ripening and tunnel ventilation.

Wood Drying Kilns

Smoke Extraction

Fruit Ripening

Tunnel & Marine Ventilation

New benchmark on the market for reversible airflow.

Robust and efficient in corrosive environments.

Wood drying kilns and other dryers require fans that can efficiently deliver equal airflow in both airflow directions at high temperatures and humidity in a corrosive environment.
